

Feedlr v0.2 Release Notes

Release date: 2012-10-15

Feedlr is an application that lets the user create multiple feeds containing news from specifically chosen Facebook and Twitter users.

This document lists all the new features, enhanced and visible changes included in the Feedlr v0.2 release.

For detailed information on using Feedlr, please refer to the *User Guide* document.

Requirements

Feedlr 0.2 requires Android 2.3 (Gingerbread) or higher.

For all features to be enabled, it also requires a Facebook account and/or a Twitter account.

Additions

- The user can now create custom feeds from registered Facebook and Twitter accounts.
- Each item in a feed now displays some additional data aside like *author* and *time posted*.
- An indicator in the actionbar shows the number of available feeds and which one is currently displayed.

Removals

The default feed showing all items from all registered accounts has been removed to make place for the new "create custom feed" feature.

Changes

A lot of changes has been made to the GUI. Both the main feed view and the settings view has seen quite a heavy makeover.

Fixes

None
