

Feedlr 0.1 Release Notes

Release date: 2012-10-08

Feedlr is an application that lets the user create multiple feeds containing news from specifically chosen Facebook and Twitter users.

This document lists all the new features, enhanced and visible changes included in the Feedlr release.

For detailed information on using Feedlr, please refer to the *User Guide* document.

Requirements

Feedlr 1.0 requires Android 2.3 (Gingerbread) or higher.

For all features to be enabled, it requires a Facebook account and/or a Twitter account.

Additions

There is a *settings view* added, this can be reached by pressing the *settings button* in the default view.

A user can authorize a Facebook account for creating feeds with. This is done in the *Settings view*

A user can authorize a Twitter account for creating feeds with. This is done in the *Settings view*.

There is a update feed button located in the *Settings view*. This will fill the default feed view with whatever feed is available. For example, if only Facebook has been authorized, the feed will contain all of the users Facebook friends' newsfeeds.

A *main button* has been added to the *settings View*. This takes the user back to the default view.

A user can now create feeds using the *create feed* button in the *settings view*.

Toggling between feeds can now be done with a single swipe over the screen. Swiping left will display a more recently created feed, and vice versa.
