Feedlr Definition of Done

All stories must fulfill the following to be done:

> Builds without errors
> Code is either commented or written in a self-explanatory way.
> Code standards are met.

The following must be fulfilled for the project to be done:

> All code is completed.
> Unit test are written and passed.
> All use cases have proved their functionality in acceptance tests.
> A quick guide for developers is provided.

Every release must include a release document explaining new features and differences from earlier releases.
